

CA Personal Firewall 2007

Every PC connected to the Internet is a potential target for hackers and identity thieves. CA Personal Firewall protects your PC from both known and unknown threats, providing complete, business-strength hacker and privacy protection. It stops intruders, blocks malicious programs, and protects your personal information from identity theft.

Simple

- Install and that's all: you're protected by our programmed settings
- Perform tasks hassle-free using our simple interface
- Get fast access to information that helps diagnose and resolve problems

Advanced

- Allows you to store your sensitive personal information, alerts you when it is about to leave your PC through the Internet or email, and allows you to block the transmission if desired
- Advanced application hardening provides increased protection against hacker attacks
- Mobile code protection blocks malicious or untrusted programs

Automatic

- Provides expert advice in real time about which programs are safe and which are dangerous
- Automatically detects new networks and helps ensure the right level of security for your network or router configuration
- Blocks unwanted pop-up ads, controls cookies, and cleans unwanted disk clutter and program history
- Monitors critical program functions and settings, and reminds you to keep your security optimised

Free Updates, Upgrades, Support

With free protection updates, free upgrades to the latest product features, and free 24/7 online support, your one-year subscription ensures you're protected from the latest threats.

- Internet Explorer 5.5 or higher
- Internet access

CA Personal Firewall 2007

Distinctive Features

- **Improved! Personal Firewall** offers the same industrial-strength hacker and privacy protection with a more integrated look-and-feel, providing you with seamless and easy to manage personal firewall protection
- **Improved! User Interface** provides simplicity and superior ease-of-use, helping you quickly and easily set preferences, check program status, and maintain a secure PC
- **New! Application Hardening** offers advanced sandboxing technology (for Windows XP and 2000) to protect CA security products from attacks by hackers, allowing the applications to run more safely and securely
- **New! Secure Now** provides proactive protection by monitoring critical program functions and settings, and reminding you to keep your security at an optimal level
- **Pre-configured Security Settings** give you optimal protection right out of the box, and reduce firewall warnings for known programs
- **Application Control** informs you when programs attempt to access the Internet, and lets you allow or deny access
- **Customised Alerts** provide instant recommendations on how to handle programs' attempts to access the Internet, intrusion attempts, and other security events
- **Automatic Network Detection** identifies the addition of a new network, and ensures proper protection for your local network or router configuration
- **Intrusion Blocking** recognises and alerts you to the most dangerous hacker threats
- **Ad Blocking** cuts out annoying pop-up and pop-under ads, letting you surf in peace
- **ID Theft Protection** allows you to store sensitive personal information, alerts you when it is about to leave your PC through the Internet or email, and allows you to block the transmission if desired
- **Email Protection** identifies and quarantines potentially harmful email attachments, and prevents mass-mailing worms from propagating
- **Backup and Restore** saves, exports, and imports your entire firewall security policy with the click of a button
- **Cache Cleaner** removes sensitive browser history and file clutter, making your PC more efficient and protecting your privacy
- **Mobile Code Protection** allows you to block malicious or untrusted mobile code (JavaScript, Active X, VBScript, etc.)
- **Cookie Control** prevents websites from tracking your behavior
